

# Embedded Coder for Production Code Generation

## Training Objectives

This hands-on, two-day course focuses on developing models in the Simulink® environment to deploy on embedded systems. The course is designed for Simulink users who intend to generate, validate, and customize embedded code using Embedded Coder®.

Topics include:

- Generated code structure and execution
- Code generation options and optimizations
- Integrating generated code with external code
- Generating code for multirate systems
- Customizing generated code
- Customizing data

## Prerequisites

*Simulink Fundamentals* (or *Simulink Fundamentals for Automotive System Design* or *Simulink Fundamentals for Aerospace System Design*). Knowledge of C programming language.

## Products

- Embedded Coder®

## Course Outline

### Day 1 of 2

#### Generating Embedded Code (2.0 hrs)

**Objective:** Configure Simulink models for embedded code generation and effectively interpret the generated code.

- Architecture of an embedded application
- System specification
- Generating code
- Code modules
- Logging intermediate signals
- Data structures in generated code
- Verifying generated code
- Embedded Coder® build process

#### Optimizing Generated Code (2.0 hrs)

**Objective:** Identify the requirements of the application at hand and configure optimization settings to satisfy these requirements.

- Optimization considerations
- Removing unnecessary code
- Removing unnecessary data support
- Optimizing data storage
- Profiling generated code
- Code generation objectives

## **Integrating Generated Code with External Code (1.0 hrs)**

**Objective:** Modify models and files to run generated code and external code together.

- External code integration overview
- Model entry points
- Creating an execution harness
- Controlling code destination
- Packaging generated code

## **Controlling Function Prototypes (1.0 hrs)**

**Objective:** Customize function prototypes of model entry points in the generated code.

- Default model function prototype
- Modifying function prototypes
- Generated code with modified function prototypes
- Model function prototype considerations
- Reusable function interface
- Function defaults

## **Customizing Data Characteristics in Simulink® (1.5 hrs)**

**Objective:** Control the data types and storage classes of data in Simulink.

- Data characteristics
- Data type classification
- Simulink data type configuration
- Setting signal storage classes
- Setting state storage classes
- Impact of storage classes on symbols

## **Day 2 of 2**

## **Customizing Data Characteristics Using Data Objects (1.75 hrs)**

**Objective:** Control the data types and storage classes of data using data objects.

- Simulink® data objects overview
- Controlling data types with data objects
- Creating reconfigurable data types
- Controlling storage classes with data objects
- Controlling data type and variable names
- Data dictionaries

## **Customizing Generated Code Architecture (1.25 hrs)**

**Objective:** Control the architecture of the generated code according to application requirements.

- Simulink model architecture
- Controlling code partitioning
- Generating reusable subsystem code
- Generating variant components
- Code placement options

## **Model Referencing and Bus Objects (1.25 hrs)**

**Objective:** Control the data type and storage class of bus objects and use them for generating code from models that reference other models.

- Creating reusable model references
- Controlling data type of bus signals
- Controlling storage class of bus signals
- Model Reference software testing

### **Scheduling Generated Code Execution (1.75 hrs)**

**Objective:** Generate code for multirate systems in single-tasking, multitasking, and function call-driven configurations.

- Execution schemes for single-rate and multirate systems
- Generated code for single-rate models
- Multirate single-tasking code
- Multirate multitasking code
- Generating exported functions

### **Improving Code Efficiency and Compliance (0.5 hrs)**

**Objective:** Inspect the efficiency of generated code and verify compliance with standards and guidelines.

- Model Advisor
- Hardware implementation parameters
- Compliance with standards and guidelines

### **Appendix A: Embedded System Terminology (0.5 hrs)**

**Objective:**

- Real-time systems
- Scheduling methods
- Glossary

### **Appendix B: TLC Overview (0.5 hrs)**

**Objective:**

- TLC overview
- A first program with TLC
- TLC directives

### **Appendix C: Fixed-Point Design (1.5 hrs)**

**Objective:** Use Fixed-Point Tool to convert your Simulink model to fixed point.

- Fixed-point scaling and inheritance
- Fixed-Point Designer workflow
- Fixed-Point Tool
- Command-line interface

### **Appendix D: Stateflow® Code Generation (1.0 hrs)**

**Objective:**

- Code generation with Stateflow®
- Stateflow data
- Stateflow storage classes
- Stateflow machine architecture
- Controlling Stateflow code partitioning
